Dear Sir,

I, Dennis M. Dearie, claim to be the inventor of the wireless hand held portable scanner/reader used to verify automobile insurance, registration and all pertinent information used by law enforcement personal in the field. This wireless system uses a barcode on the windshield and/or driver's license. I use an Internet home page or we can use database provided by individual state and hope to have each state integrated on our system.

Please respond if further information is needed. If needed we can have each vendor send in specs of their units. We can also customize each application if need be.

Thank you very much,

Dennis M. Dearie
Owner, President and Inventor
